DETAILED ACTION

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance:
 - a. Claims 1 – 23 are allowable over the Prior Art of Record because it fails to teach or suggest a method for evaluating transmitted signals of a probe system, the probe system including a probe element deflectable from a rest position, comprising the step of generating the transmitted signals by the probe element, the transmitted signals including a switch – on signal during a deflection of the probe element out of the rest position and forming a reference signal by interlinking the information signals with the interference signals in combination with the remaining limitations of the claims.
 - b. Claims 24 – 39 are allowable over the Prior Art of Record because it fails to teach or suggest a system for analyzing received signals in a probe system, the probe system including a measuring probe having a probe element deflectable from a rest position, the measuring probe configured to generate transmitted signals as a function of deflection of the probe element, comprising an arrangement configured to interlink the information signals with the interference signals to form a reference in combination with the remaining limitations of the claims.

c. Claims 40 - 59 are allowable over the Prior Art of Record because it fails to teach or suggest a method for evaluating transmitted signals of a probe system, the probe system including a probe element deflectable from a rest position, comprising the step of generating the transmitted signals by the probe element, the transmitted signals including a switch – on signal during a deflection of the probe element from the rest position in combination with the remaining limitations of the claims.

d. Claims 60 - 70 are allowable over the Prior Art of Record because it fails to teach or suggest a system for analyzing received signals, comprising a probe system including a measuring probe and a receiver unit, the measuring probe configured to generate transmitted signals as a function of deflection of the probe element, the receiver unit including a differentiator connected to an input of the arrangement configured to compare the received signal in combination with the remaining limitations of the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
